

ROHIT MAHALI

Central University of Jharkhand, Ranchi, India

☎ 7070356123 ✉ Rohit.22190503048@cuja.ac.in 🔗 [linkedin.com/in/rohit-mahali](https://www.linkedin.com/in/rohit-mahali) 🐙 github.com/rohitmahali01

Education

B.Tech + M.Tech (Integrated), Computer Science & Engineering

2022 – 2027

Central University of Jharkhand

Spec: Machine Learning & Data Science

Technical Skills

Data Analysis & Databases: Advanced SQL (Joins, Window Functions, CTEs, Query Optimization), Relational DBs, Normalization

Programming: Python (Pandas, NumPy, Matplotlib, Scikit-learn, PyMuPDF), C

Visualization & BI: Power BI, Streamlit (Dashboarding), Matplotlib, Seaborn

Data Engineering: ETL Pipelines, Data Cleaning, Regex (Pattern Matching), Unstructured Data Parsing

Tools & Cloud: Git/GitHub, Google Cloud Platform (GCE), Excel (Pivot Tables, VLOOKUP)

Experience

Indigenous Language Development Intern

Remote/Hyderabad

IndicWiki Project, IIIT Hyderabad

- Utilized complex querying techniques (Wiki Query) to extract, filter, and structure data from large-scale repositories, ensuring high data integrity for downstream tasks.
- Managed relational data mapping to ensure consistency across Wikipedia sister projects, identifying and resolving schema discrepancies.
- Performed rigorous data validation and quality checks on datasets to ensure accuracy for low-resource languages.

Projects & Research

Dia-RAG: Dialect-Aware Retrieval Architecture (Ongoing Research)

<https://github.com/rohitmahali01/Dia-Rag>

- **Research Proposal:** Authored a comprehensive research paper proposing “Dia-RAG,” a novel framework to solve the standardization bottleneck and lexical erasure in low-resource dialectal RAG systems.
- **System Design:** Designed a theoretical architecture featuring a diversity-sensitive decoupler to split queries into invariant/variant components and a dictionary-augmented retrieval layer to preserve cultural nuance.
- **Experimental Design:** Formulated the “Santali-CultureQA” evaluation benchmark and proposed the Cultural Specificity Score (CSS) metric to quantitatively measure hallucination in dialectal generation.

Santali Language Suite (Data Cleaning + ASR)

<https://github.com/rohitmahali01/Santali-Tokenizer> — <https://github.com/rohitmahali01/Whisper-Santali-Asr>

- Orchestrated the end-to-end data pipeline for a low-resource language model, processing large-scale audio datasets from the Mozilla Common Voice repository.
- Implemented rigorous data cleaning and normalization workflows using Python to handle noise, silence removal, and text-audio alignment, significantly improving dataset quality.
- Fine-tuned the Whisper ASR model and evaluated performance using Word Error Rate (WER).

Smart Tax Platform (AI Document Analysis)

<https://github.com/rohitmahali01/Smart-Tax-Platform-with-AI-Document-Analysis>

- Engineered a financial data extraction engine using Python (PyMuPDF) to parse unstructured PDF salary slips; implemented robust logic to handle null values and missing fields automatically.
- Designed intelligent regex pattern matching algorithms to identify and extract key financial indicators (Gross Salary, HRA, TDS) across varying document layouts with high precision.
- Integrated Google Generative AI to analyze extracted data and generate comparative reports on tax regimes.

Hackathons

LIT-RAG — HackRx 6.0 Hackathon Semi-finalist (Top 38/9000)

<https://github.com/rohitmahali01/LIT-RAG>

- Led a team of 5 to design a high-speed ETL pipeline for processing unstructured document data, reducing data retrieval time to < 15s.
- Orchestrated the extraction, transformation (embeddings), and loading of data into Pinecone Vector DB, utilizing Python multiprocessing for concurrency.

Ol Chiki Transliterator (Interactive Dashboard)

<https://github.com/rohitmahali01/Olchiki-Transliterator>

- Designed and deployed an interactive Streamlit dashboard to visualize real-time text transliteration between Ol Chiki, Devanagari, and Latin scripts.
